TAGS – Thesaurus of Australian Government Subjects

Version 1.1

Introduction

Background

This Thesaurus was developed as a result of a Project known as the Australian Whole of Government High Level Subject Thesaurus Project, sponsored by the National Office for the Information Economy (NOIE).

The purpose of the Project was to develop a high level thesaurus of subject terms for use by Government agencies, which all agencies may use in the AGLS Subject element to describe their resources. AGLS Metadata facilitates discovery and use of an agency's resources online. Subject metadata chosen from a controlled vocabulary such as this Thesaurus increases the ease and precision with which information can be located.

TAGS - Thesaurus of Australian Government Subjects - is the title for this Thesaurus, that was compiled between August and December, 2001. The thesaurus was intended to:

- a. Cover, at a high level, subject concepts representing the scope of Commonwealth government activities
- b. Provide a potential source of terminology for portal browse lists, and
- c. Provide a subject vocabulary which is broader than the detailed vocabularies already adopted by some agencies, but which is able to function as an introduction to those detailed vocabularies, or to serve as a controlled vocabulary for those agencies without a specialised one.

The thesaurus conforms with ANSI/NISO Z39.19, *Guidelines for the construction, format and management of monolingual thesauri* - the standard for structure and organization of information retrieval thesauri.

Compiling the TAGS Thesaurus

TAGS presents the business of government from a subject or topic perspective, and is independent of the structure of government. The Thesaurus represents concepts in a neutral way, and will cover all general areas of interest to government.

Following an initial review of candidate thesauri, the Canadian Whole of Government Subject Thesaurus¹ was chosen as the base list for the draft Australian Thesaurus. No single Australian subject thesaurus covered the range of relevant subject matter at an appropriate high level. The Canadian Thesaurus was found to cover a wide range of topics relevant to Australian Commonwealth government interests, hierarchical and reference relationships were already established in accordance with ANSI/NISO Z39.19 (a requirement of the Project), and it

¹ Permission to use the Canadian Thesaurus for this purpose was obtained by the National Archives of Australia (NAA).

featured a useful classification of terms into broad subject categories independent of the hierarchical arrangement.

The Project commenced with discussions between the consultant and representatives of the National Office for the Information Economy (NOIE), National Archives of Australia (NAA), National Library of Australia (NLA), Dept of Finance and Administration (DOFA), Centrelink and portal lead agencies. A Workshop with representatives of key stakeholders canvassed the aims, operational requirements and desired outcomes. More extensive and detailed discussions took place with members of a reference group representing NOIE, DOFA, Centrelink and some subject portals. This group enthusiastically reviewed successive drafts, providing valuable contributions and comments to help achieve this version. Representatives of the Aboriginal and Torres Strait Islander Commission (ATSIC) reviewed the final draft and this version reflects their suggestions for terms relating to Aboriginal and Torres Strait Islander peoples.

The base list of terms from Canada was amended to reflect Australian needs and terminology. Terms of purely Canadian relevance were deleted, and Canadian terminology and spelling was replaced with Australian versions. Additional terms were selected to augment the subject coverage for Australian use. Sources used in the selection of new terms included:

- Australian subject thesauri
- Commonwealth agency subject lists
- Portal browse lists, and
- Agency subject metadata

The *APAIS Thesaurus*, the *Centrelink Thesaurus* (originally based on APAIS), and the *fed.gov* browse lists were particularly valuable sources. A list of published sources appears at the end of this Introduction.

Whenever possible, the terms included in TAGS are those currently used by Commonwealth agencies. Editorial judgment was applied in selection of terms and in establishing a ‘neutral’ hierarchy. Agencies do not necessarily use the same term for a subject, and sometimes a term has different connotations in different agencies. Similarly, Australian subject thesauri are not consistent in their use of terms, since thesauri are compiled over time, for different purposes, and reflect the view and subject focus of the sponsoring agency.

Examples of various ways of expressing the concept ‘Occupational health and safety’:

<i>APAIS Thesaurus:</i>	}
<i>Family Thesaurus:</i>	} Occupational health; Safety (two terms)
<i>Australian Transport Index Thesaurus:</i>	}
<i>Centrelink Thesaurus:</i>	Occupational health and safety
<i>Health Thesaurus:</i>	OH&S (with a reference from Occupational health and safety)
<i>Australian Occupational Health and Safety Thesaurus</i>	Does not actually use the term ‘Occupational health and safety’ because the entire Thesaurus concerns this topic. It does use the phrase in non-preferred terms, e.g., ‘Occupational health and safety committees USE Health and safety committees’.

A balance between the need for the Thesaurus to be ‘high level’ whilst at the same time being ‘detailed enough to be useful’ for metadata authors and searchers was also sought.

Not all topics are covered to the same level of detail in TAGS, and subject matter unrelated to the business of government is excluded. The most detailed coverage is given to topics where no appropriate subject thesaurus already exists. In some cases detail is included selectively, for example the terms ‘Wool’ and ‘Cotton’ are included but ‘Mohair’ is not. The hierarchical structure allows additional terms to be included later if necessary.

For subject areas where agencies already use an established subject thesaurus, such as health and agriculture, the TAGS terminology has been deliberately kept at a very high level. In these cases it is recommended that TAGS be used in conjunction with the specialist thesaurus: TAGS is used to provide the general term(s), supplemented by specific terms from the specialist thesaurus.

The Thesaurus has been deliberately kept to a manageable size, in order to encourage its adoption and use, and for ease of review and maintenance. It contains a total of 3216 terms, comprising 1430 Preferred terms and 1786 Non-preferred terms (entry terms or reference points). The structure is hierarchical, using a "tree" structure that starts with broad concepts (top terms) which are then broken down into narrower concepts. The structure is fairly flat, with 571 top terms, and a maximum of 3-4 steps in each hierarchy.

A particular requirement of the Project was to map (cross-reference) from *APAIS* and *AGIFT* terms to TAGS terms whenever appropriate and possible. Because the *APAIS Thesaurus* is a subject thesaurus with a similar structure to the Canadian Thesaurus, and the Canadian Thesaurus includes many terms (or synonyms) which are also in *APAIS*, the *APAIS* mapping was quite straightforward. *APAIS* terms which fall outside the scope of TAGS are not included. Where there is a clear correspondence between *AGIFT* and TAGS the terms have been mapped.

Using the Thesaurus

Terminology

TAGS consists of Preferred terms and Non-preferred terms. Relationships between terms are expressed with standard notation, described in the next section

Subject thesaurus terms are used to describe the subject matter of resources – they describe what resources are **about**. This thesaurus is designed for post-coordinate retrieval – that is, each term represents a single concept, and as many terms as necessary may be used to describe a resource. This provides for flexibility and precision during resource discovery, because the searcher is able to combine terms to satisfy the particular enquiry. In indexing and retrieval, composite concepts may require the use of two or more keywords. For example, a resource dealing with ‘computer network security’ would have the TAGS terms ‘Computer networks’ and ‘Security measures’ assigned as Subject metadata.

This contrasts with a ‘browse tree’ in which ‘Heading – Subheading – Sub Subheading’ is the usual format (this is known as ‘precoordination’).

The Thesaurus follows these conventions:

- Each term represents a single concept; concepts may be expressed by a single-word term or a multiword term. Concepts may be:
 - Things e.g., Animals
 - Materials e.g., Gas
 - Activities or processes, e.g., Contracting
 - Events or occurrences, e.g., Public holidays
 - Properties e.g., Accessibility
 - Disciplines or subject areas e.g., Psychology
- Terms are expressed as nouns or noun phrases
- Terms for things are usually plural (e.g., Health hazards); terms for abstract concepts are usually singular (Health promotion)
- Where the same word represents different concepts, qualifiers are added in parentheses. For example, Pilots (Aviation), Pilots (Maritime)
- Proper names, geographic names and terms describing ‘forms’ (e.g. Amendments, Biographies, Booklets) are excluded. These are catered for by AGLS elements other than Subject.

The *Macquarie Dictionary* is the authority for spelling. The *Commonwealth Style Manual* and its publishers, InfoAccess, were consulted for guidance on language concerning age, gender, and people with disabilities.

Notation

The notation for the display of terms is:

SC:	Subject Category (or Categories) to which the term is assigned
SN:	Scope Note, explaining coverage or usage of the term
BT:	Broader Term
NT:	Narrower Term
RT:	Related Term
UF:	Used For – lists Non-preferred terms or synonyms
USE:	Indicates the Preferred term to be used

Example:

Environmental management

SC: EN Environment and Nature

SN: General management procedures or practices designed to minimise damage to the environment, both natural and built, from any human activity. For management techniques dealing with particular resources see Resources management and its narrower terms.

UF: Conservation
Conservation (Environment)
Environment conservation
Environmental conservation
Environmental control
Preservation (Environment)

NT: Environmental impact
Environmental protection
Nature conservation
Resources management

RT: Environmental policy
Sustainable development
World heritage

USE statements direct the reader from a Non-preferred term to a Preferred term. For example, in statements such as

Environmental conservation USE Environmental management

Job prospects USE Employment opportunities

Environmental management is the Preferred term, and **Environmental conservation** the Non-preferred term, **Employment opportunities** is the Preferred term, and **Job prospects** the Non-preferred term.

USE references may refer from:

- a synonym to a Preferred term, e.g. Guns USE Firearms
- a variant spelling or form of word, e.g. Childcare USE Child care
- a very specific term to a more general term, e.g. Helmets USE Personal protective equipment

Sometimes a reference is required from a compound concept to its components. This is necessary when the term is split and both components must be used in searching, e.g. **Mental health services USE Mental health AND Health services**. At present very few of these references occur in the Thesaurus, but they will be added as required.

Subject categories

The Subject categories that group broadly related terms are:

AG	Agriculture		
BI	Business and Industry	ET	Education and Training
CH	Culture and Heritage	GP	Government and Politics
CS	Community and Society	HS	Health and Safety
DE	Defence and National Security	IC	Information and Communications
EF	Economics and Finance	LJ	Law and Justice
EM	Employment	ST	Science and Technology
EN	Environment and Nature	TR	Transport

Two additional categories, PE Persons, and PR Processes, provide useful groupings for general terms.

Updating Procedures

Before further editorial work, TAGS will be subjected to an ‘operational trial’ during which additional terms and entry points, scope notes and comments will be collected. It is anticipated that TAGS will be revised after this phase.

An updating mechanism will be established in order to keep TAGS up to date, and to protect the considerable investment of time and goodwill made during the Project.

Acknowledgements

Early in this Thesaurus Project a Core Reference Group was established, with representatives of:

Centrelink
Dept of Agriculture, Fisheries and Forestry
Dept of Employment, Workplace Relations and Small Business
Dept of Finance and Administration
Dept of Transport and Regional Services
Environment Australia
National Office for the Information Economy

Members of this Group reviewed successive informal drafts of this document. Their cooperation, contributions and advice are gratefully acknowledged.
